SPORT TOURING

*"It's a bike that makes me
daydream about my next big tour."*

"From mountain passes to coastal roads, from vineyards to river valleys – I'm a collector of great landscapes. And my favourite way to see them is from the seat of my bike.

Why do I ride an FJR1300A? Two reasons. On the one hand, it's so comfortable that I can ride it for a couple of weeks without starting to feel the strain. Everything's adjustable – the screen, the cowl, the seat, the handlebars – so it feels like it's been shaped for me. When my girlfriend's on the back, she says the same thing.

On the other hand, it's a proper thrill to ride. Some tourers feel like sofas on wheels, but this one is different; it's really light to handle, great for pushing through the corners on twisty mountain roads. And on the straights, that acceleration is mind-blowing.

It certainly doesn't feel like I'm travelling with full luggage and my girlfriend on the back!

It's a bike that makes me daydream about my next big tour, every time I ride it. When time and money allow, I'd like to fit it out with all the extras – luggage, fairing – and do the trip of a lifetime."

*"It's got MotoGP in its blood,
and so have I."*

"Since I was a kid, I've dreamed of being a Supersport rider. Now it's a dream I get to live – on the track at weekends, and streaking past the traffic during the week.

I love my YZF-R1. That ultra-snappy handling that lets me cut through the competition. That big snarl when I open the throttle. It's got MotoGP in its blood, and so have I.

The controllable torque delivery is well known – as any bike fan will tell you, it's the advantage of the crossplane crankshaft. But the knock-on effect is incredible traction, and with the Traction Control System, I can fine-tune the bike for better road or track holding, simply by flicking a switch.

Of course, it looks fantastic too. Like all classic designs, it's beautifully minimal. You can feel how they've kept the weighty components round its centre of gravity, which is essential for better handling.

Accessorising is all part of the YZF-R1 dream. I like having the option of tricking it out for the track, or putting an Akrapovič exhaust on there – they sound as brilliant as they look."

A misty, mountainous landscape with a road winding through the foreground. The scene is captured in a soft, overcast light, with a thick layer of mist or low clouds obscuring the middle ground. The foreground shows a dark, textured road or path leading towards the distance. The overall mood is serene and atmospheric.

*"It begs you to find a
twisty road and go play."*

"A bike is so many different things to me. It's the way I get to work, and the way I leave work worries behind. It's a way round the city, and a way out of the city. It's the familiar and the unknown, the near and the far.

I ride the Fazer8 because it can be all those things, and it never feels like a compromise.

That torque-heavy engine is just so versatile. In the city it puts me ahead of the pack on even the busiest mornings; and on the open road, I can open the throttle, hear that sound, and it sets my heart racing.

I can feel the MotoGP design that must have gone into making this bike. It's just so light and exciting, it begs you to find a twisty road and go play.

It's more than just a sports machine though. The fairing is genuinely effective; it feels comfortable and protected even in bad weather; it's great for getting away from it all, for a day or two.

It's a versatile bike, and Yamaha have reflected that in the accessories they offer for the Fazer8. Being able to trick it out for a weekend tour or a day in the hills? It's all part of the pleasure."

XT1200Z SUPER TÉNÉRÉ

"My motto is 'go further'. I have a serious case of wanderlust. Rivers, ravines, long freeways, twisting mountain roads; I want to ride them all. The XT1200Z Super Ténéré is my bike of choice, because it won't quit. It keeps pulling me in all the right directions.

Naturally, it's a big bike, but the first time I sat on it, I was surprised by how compact it felt – because it uses a 2-cylinder engine layout, that beefy 1199cc engine doesn't take up too much space. It's weighted beautifully too, which means I can spend all day throwing it around and not finish up exhausted. That surging torque gives me the confidence to scramble up steep inclines or power through boggy ground. And the intelligent braking makes me feel ready for any sudden changes of terrain.

Yamaha understand that every Ténéré rider has slightly different needs, so there's a lot of extra gear you can attach to it. Extra luggage, extra protection... it goes as far as I want."

Luggage for every extreme

If you're on a bike that can go anywhere, you need cases to match. That's the thinking behind these ultra-rugged aluminium sidecases for the XT1200Z Super Ténéré.

With a generous 32L capacity per side, they're water resistant, feature one-key locking, and can be supplemented with an inner bag.

"I think everyone who rides a TMAX for the first time is amazed."

"Ever since it appeared on the road, being a TMAX rider has felt like belonging to a club. It was the very first machine to combine motorcycle-style fun in the form of a scooter. It's a good feeling, riding a groundbreaker like this.

I think everyone who rides a TMAX for the first time is amazed by how much punch it has – and the latest version has taken that to a new level. The new bodywork looks properly fast, to match.

When I pull away from the lights with other scooters, I'm always straight ahead of the pack – that 530cc engine has some serious poke, and now they've put a new belt drive in, it's better than ever. The new chassis is lighter too, which makes a difference when I'm weaving through rush hour traffic.

It's genuinely a machine for both in and out of town; with those big wheels and that reactive suspension, I'm comfortable on cobblestones or the freeway.

When you have a TMAX, the temptation is always to take it away for a weekend tour. I've fitted mine with luggage for weekend touring, and a sport screen for wind protection on all-day rides."

Style and protection

For gusty days in the city, some extra wind protection can make all the difference. Fitting a dedicated TMAX sport screen gives you valuable shelter from the elements – and adds a sporty, sleek twist to your TMAX silhouette.

Genuine. Safe.

Genuine Yamaha Spare Parts are the Number 1 Choice when maintaining any Yamaha vehicle because they are specifically developed and designed in conjunction with the product.

When using Genuine Yamaha Spare Parts, you are ensured of:

- Perfect fit
- Proven use of high-quality materials
- High resistance to wear and tear
- Proven safety standards
- Any technical updates where necessary

Specific details on each product are described in the following pages and help explain more about the 'Real Quality of Genuine Yamaha Spare Parts'.

*"Why do I use Yamaha genuine parts?
Because every part of my bike should
be equally reliable."*

Bruno, 38, Spain

Air Filters

Original equipment air filters maintain engine power and avoid engine damage

Yamaha Motor develops exclusively, for every model, the complete intake system, including the air filter, to provide optimal air flow to the engine.

This allows Yamaha to achieve the optimum engine characteristics for each model. It is therefore important to use Genuine Yamaha air filters to help maintain optimum engine performance. Air filters also help prevent potentially hazardous substances, such as sand and dust, from entering the engine, where they can cause damage or wear in the

area of the piston and cylinder. These miniscule parts may also find their way into the engine-oil causing premature wear and tear on other engine parts.

Dust captured in any air filter causes a gradual reduction in airflow over the working life of the part, resulting in a loss of engine performance and poor fuel consumption. Genuine Yamaha Air Filters are designed in such way, so as to filter the air in the most efficient way, whilst maintaining their flow rate, when compared with many aftermarket air filter.

Brake Pads

Genuine Yamaha parts - no compromise on safety

All parts must pass very stringent performance and durability tests before they qualify as genuine Yamaha parts. For brake system components, these

tests are very severe, as safety is concerned. The tests include adhesion between the pressure plate and the friction material, tests for wear, vibration, resistance to cold temperature and spray tests. Yamaha spares no effort to optimize either the combination of brake pads, calipers and discs or that of brake shoes and drums.

Genuine Yamaha brake pads have been developed specifically for each Yamaha model in order to achieve the best braking performance and balance with the chassis.

Genuine Yamaha brake pads are specially developed according the characteristics of each Yamaha model, unlike the majority of aftermarket brake pads that are designed to fit many different models, which has a large impact on the brake performance of the brake pad.

Chain Kits

The quality of genuine chain & sprockets

No other type of chain is called upon to operate in such a harsh environment, as a motorcycle chain. The difference between a good and bad chain, can be seen most clearly in the degree of stretching caused by wear and the resistance to fatigue.

Superior chains are characterized by the following features:

- Good resistance to wear
- Good resistance to fatigue
- Ability to withstand shock and tensile force
- Joints / Links which remain flexible

Overall, a drive chain must have the strength and durability to match the engine's power and the hardness of the sprocket material. The side plates, which may be considered as the 'frame' of the drive chain, must also have the necessary strength to withstand the tensile load put upon it.

The teeth of the sprocket and any other parts subject to large forces are made as hard as possible, through a heat treatment method called Carburized quenching, after which the sprockets are tempered to gradually decrease the hardness towards the inner part, to produce a tough sprocket of ideal strength.

Using Genuine Chain & Sprocket Kits is the only real way to assure a perfect match between sprockets and chain, thus achieving the maximum lifetime, for both sprockets and chain.

Genuine Belts and V-Belts

*Superior strength
and durability*

Specifically designed to match the vehicles' characteristics

Yamaha Genuine V-belts are designed for maximum strength and durability, to meet the specific requirements of the vehicle they are to be used on. The rubber from which any V-Belt is made are very sensitive to temperature and a difference of only a few degrees may require a belt specification to be substantially changed. Yamaha genuine V-belts use the best rubber materials available for improved temperature behavior and durability. If the V-belt is of inferior quality, it may break when in use, with the possibility of loss of drive, or even a locked wheel, resulting in a potentially dangerous situation.

Design and materials for a long life

Yamaha Genuine V-belts have been subjected to extensive testing, as a result of which, the belt material, length, and width have been specifically designed, giving belts higher durability and longer life. The low edge belt in combination with a small pulley offers good flexibility and has superior temperature resistance.

The drive components, genuine drive belts and V-belts for all Yamaha models are designed and developed as a complete 'drive system' to provide durability, abrasion resistance and heat resistance suitable for the engine power.

Oil Filters

An oil filter helps prevent foreign matter infiltrating into the engine

The oil filter cleans the engine oil as it circulates through the engine. If the oil filter is not periodically replaced it can become clogged with debris and eventually the engine oil may start to circulate without passing through the filter, which is liable to greatly increase engine wear and consequently shorten the life of the engine.

Spark Plugs

Spark plug design and characteristics should perfectly match the engine

For spark plugs, it is important to locate the spark in exactly the predetermined area of the combustion chamber, to assure optimal engine performance. Engine design factors, such as the shape and size of the combustion chamber, the number and size of intake and exhaust valves and angle of the valves are all aspects to be considered when choosing a spark plug. If it is not possible to find the correct spark plug during the engine development stage, Yamaha engineers will design and develop a totally new one.

For example, the 2009 and later model YZF-R1 has a high rpm, large bore and short stroke engine, offering increased engine power and wider heat range. Previous spark plug designs could not be fully cooled, so long reach plugs, with a very long thread body were developed.

It is therefore important to use the specified spark plug, for any model, for both maximum engine performance and to avoid damage to the engine.

Batteries

Correct maintenance can improve battery reliability considerably

Modern motorcycles are very dependent upon their battery for a number of reasons, including the increased number of electrical components. The battery appears to be a simple component, although one whose internal component parts have been continuously improved over the years. The battery contains alternately placed positive plates, separators and negative plates, all bathed in an electrolytic solution. The charging and discharging process is repeated by a chemical reaction between the positive and negative plates.

When a motorcycle-battery is not regularly charged (e.g. during winter-time), this chemical reaction will become less and less

effective, which leads to poor battery-performance and ultimately, reduced lifetime of the battery. Keeping a battery charged, for example via a Yamaha YEC charger, helps ensure maximum performance over a long period of time!

The Yamaha YEC-40 charger (part number: YME-YEC40-EU-00) has a special charge / discharge function to keep the battery 'alive' and to some degree, even recover old batteries. There are also various accessories available, to make it even easier to use this charger, such as the 'Comfort-indicator' plug, that gives a clear indication of the status of the battery.

YEC-40 BATTERY CHARGER

YME-YEC40-EU-00

Specifications:

Battery charge capacity: 1.2-90 Ah

Maintenance capacity: 1.2-120 Ah

Type: 8 step, fully automatic switch

model with pulse maintenance

Dimensions: 168 x 65 x 38 mm

Weight: 0,6 kg

CE/TÜV/WVTA approved: CE

YEC-8 BATTERY CHARGER

YME-YEC08-EU-00

Specifications:

Battery charge capacity: 1.2-32 Ah,

maintenance capacity: 1.2-100 Ah

Type: 4 step, fully automatic switch

model with pulse maintenance

Dimensions: 140 x 50 x 38 mm

Weight: 0,6 kg

CE/TÜV/WVTA approved: CE

FEATURES AND BENEFITS

- Contains unique battery charging technology. Fully automatic switch mode charger that analyses the state of the battery, charges and automatically switches to maintenance charging when ready
- Designed for safety: spark-free, protected from reverse polarity connections and short-circuit proof
- Light and compact; handy and easy to store
- Specially tested and approved by Yamaha service engineers to fit our range of motorcycles, scooters, ATV, SMB and Marine products

**YEC INDICATOR
PANEL 150**

YME-YECIP-15-00

The indicator panel is a combination of the YEC built-in panel plug and the YEC indicator panel. It has a long, 1.5 metre cable and a 'traffic light' style battery indicator that can be mounted on the dashboard of a Yamaha scooter or motorcycle and fits on the Yamaha YEC-8 and YEC-40 battery chargers. The indicator provides a clear view of the charge condition of the battery.

**YEC BUILT-IN
PANEL PLUG**

YME-YECPA-15-00

The built-in panel plug with an extra long, 1.5 metre cable that can be mounted on the dashboard of a Yamaha scooter or motorcycle and works together with the Yamaha YEC-8 and YEC-40 battery chargers.

**YEC BATTERY
CHARGER INDICATOR**

YME-YECPL-05-00

This indicator plug with a long, 0.5 metre cable and a 'traffic light' style battery indicator fits on the newly developed Yamaha YEC-8 and YEC-40 battery chargers for motorcycles, scooters and other vehicles. The indicator provides a clear view of the charge condition of the battery.

A close-up, profile view of a woman with long, dark hair, looking out towards the right. She is wearing a white t-shirt with red accents on the shoulders. The shirt has the Japanese characters 'ヤマハ' (Yamaha) on the left shoulder and the English word 'YAMAHA' on the right shoulder. The background is a bright, hazy sunset or sunrise, with the sun low on the horizon, creating a soft, golden glow. The overall mood is serene and contemplative.
